DETAILED ACTION

1. This office action is in response to communication filed on 4/2/2010.
2. Claims 1, 3-20 are presented for examination.

Allowable Subject Matter

3. The present invention is directed to a database for storing online advertising-related information. The database is structured to enable accessing, and generating online advertising reports in less time. This may encourage sales and marketing personnel for generating reports on time.

4. The closest prior art are:

5. Haitsuka et al.(6,847,992) teaches summary record may include "the results of the statistical analysis performed in step 825,including objects associated with text and graphical displays, such as tables and graphs"

6. Jones et al (7,610,213) teaches alerting when a trouble ticket has reached a threshold(Figure 3A).

7. Warren (6,694,322) teaches minimizing the number of requests to the database 116, the present invention maintains a cubelet heap that will prioritize which cubelet will be returned from the data cache 113 when it is necessary to free up cache space.

The final priority function will be determined based on experimentation. The initial priority function is preferably a combination of Least Recently Used (LRU), the number of results in the cubelet, and the estimated detail level of the cubelet. The estimated detail level is preferably used because summary queries (those closer to the root of dimensional hierarchies) are generally

more costly to the database than detail queries (those closer to the members of the dimensional hierarchy).

8. Article titled, "Multidimensional DB on Comeback Trail" by Rosemary Cafasso teaches the advantages of multidimensional database is very fast and very complex queries, something relational technology cannot do easily. Multidimensional databases have received plenty of attention recently as part of the on-line analytical process trend.

9. With respect to independent claims 1, 6, and 13 the references alone or in combination failed to teach **"receiving consumer data from a plurality of client computers; creating, in a computer, a database based on the consumer data, wherein the database comprises a plurality of hierarchy tables configured to store at least some of the consumer data, each hierarchy table comprising at least one fact associated with at least one dimension, wherein the plurality of hierarchy tables are arranged such that at least one of the plurality of hierarchy tables has a highest number of dimensions and a second of the plurality of hierarchy tables has the lowest dimensions; extracting data from the plurality of hierarchy tables within the database based on the user selected values; receiving alert conditions from a user using the front end, the alert conditions comprising dimensions and facts; and alerting the user when the consumer data meets the alert conditions.**

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should

preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
